ISO/IEC 27001 Information Security Management

Keep your confidential information safe

ISO/IEC 27001 Information Security Management (ISMS)

Information is a valuable asset that can make or break your business, so the security of information (infosec) should be a high priority. When properly managed it allows you to operate with confidence. Information security management gives you the freedom to grow, innovate and broaden your customer-base in the knowledge that all your confidential information will remain that way.

What is ISO/IEC 27001?

ISO/IEC 27001 is an internationally recognized best practice framework for an information security management system (ISMS). It belongs to the ISO 27000 series of standards (including ISO 27002 and ISO 27005). It helps you identify the risks to your important information and put in place the appropriate controls to help reduce the risk.

Client Case Study - Exponential-e

Exponential-e is a leading London based cloud and networking company, providing innovative technology services. To help reassure clients and ensure the highest levels of service, Exponential-e has gained certification to multiple international standards including ISO 9001 (Quality Management), ISO/IEC 27001 (Information Security Management), ISO/IEC 20000 (IT Service Management), ISO 22301 (Business Continuity Management), and CSA STAR for cloud security. The focus on information security not only demonstrates that best practice controls are in place, but helps Exponential-e regularly identify and mitigate threats to information.
