## HOW MORPHEUS8 MICRONEEDLING WORKS

RF Microneedling with the Morpheus8 device combines two advanced technologies: fractionated radio frequency and microneedling. The device creates microscopic needle punctures during treatments as it glides over the skin. These tiny wounds stimulate natural skin rejuvenation by prompting the body to produce more collagen and elastin.

In addition to microneedles, Morpheus8 uses Fractionated Radiofrequency energy to heat the tissue, causing it to contract and tighten, which further boosts collagen production. Unlike other RF Microneedling treatments that only affect the superficial layers of the skin, Morpheus8 targets the deepest layers. It is FDA-cleared to rejuvenate skin through subdermal adipose remodeling, effectively remodeling fat below the skin's surface.

# RF MICRONEEDLING BENEFITS

Morpheus8 RF Microneedling boasts a wide variety of benefits, including:

- ✓ Effectively treats excessive sagging or loose face and neck skin, including jowls and double chin
- ✓ Dramatically tightens skin and stimulates the production of new collagen
- ✓ Regenerates the deep layers of the skin with little downtime
- ✓ Offers optimal non-surgical results for noticeably younger, firmer skin
- ✓ Is not just reserved for the face and neck, it can treat any other areas of the body
- ✓ Hollywood's favorite new treatment
- ✓ Won New Beauty's 2022 "Best Skin-Tightening Microneedling Treatment" award
- ✓ Take 30 days between sessions for maximum results
- ✓ Improves skin quality, dissolves fat, reduces wrinkles and sagging skin
